# ABOUT CPL

In recent years, the automotive bearing industry has witnessed a trend towards branding and diversification. However, this trend has also brought about challenges: a wide variety of product models and unstable supply, resulting in inventory buildup and declining brand profits. To address these issues, Che Pei Lian (Hangzhou) Automotive Components Co., Ltd. was established, bearing the mission of solving these challenges.

We gather the advantageous products of each domestic hub bearing manufacturer, ensuring ample inventory to provide quality service. Our main products include automotive wheel hub bearings, hub units, bearing repair kits, hydraulic release bearings, single-row tapered roller bearings, miscellaneous bearings, air conditioning compressor bearings, universal joints, wheel hub bearing clutch bearings, steering bearings, and gearbox bearings, totaling over 1,700 varieties.

In 2022, we established Che Pei Lian (Zhejiang) Automotive Components Co., Ltd., collaborating with top-tier factories to fully exploit their strengths and potentials, optimizing product and market strategies, and addressing issues such as reducing manufacturer inventory pressure and scattered sales. Through these measures, we have increased the turnover speed of manufacturer products and added value. Additionally, we have set up a warehouse of over 5,000 square meters, stocking more cost-effective products, and providing the best storage guarantee for independent brand bearing merchants.
